This household sewing machine is designed to comply with IEC/EN 60335-2-28 and UL1594.

IMPORTANT SAFETY INSTRUCTIONS
When using an electrical appliance, basic safety precautions should always be followed, including the following:
Read all instructions before using this household sewing machine. Keep the instructions in a suitable place close to the machine. Make sure to hand them over if the machine is given to a third party.

DANGER – To reduce the risk of electric shock:
• A sewing machine should never be left unattended when plugged in. Always unplug this sewing machine from the electric outlet immediately after using and before cleaning, removing covers, lubricating or when making any other user servicing adjustments mentioned in the instruction manual.

WARNING – To reduce the risk of burns, fire, electric shock, or injury to person:
• Do not allow to be used as a toy. Close attention is necessary when this sewing machine is used by or near children.
• Use this sewing machine only for its intended use as described in this manual. Use only attachments recommended by the manufacturer as contained in this manual.
• Never operate this sewing machine if it has a damaged cord or plug, if it is not working properly, if it has been dropped or damaged, or dropped into water. Return the sewing machine to the nearest authorized dealer or service center for examination, repair, electrical or mechanical adjustment.
• Never operate the sewing machine with any air openings blocked. Keep ventilation openings of the sewing machine and foot control free from the accumulation of lint, dust, and loose cloth.
• Keep fingers away from all moving parts. Special care is required around the sewing machine needle.
• Always use the proper needle plate. The wrong plate can cause the needle to break.
• Do not use bent needles.
• Do not pull or push fabric while stitching. It may deflect the needle causing it to break.
• Wear safety glasses.
• Switch the sewing machine off (“0”) when making any adjustment in the needle area, such as threading needle, changing needle, threading bobbin, or changing presser foot, etc.
• Never drop or insert any object into any opening.
• Do not use outdoors.
• Do not operate where aerosol (spray) products are being used or where oxygen is being administrated.
• To disconnect, turn all controls to the off (“0”) position, then remove plug from outlet.
• Do not unplug by pulling on cord. To unplug, grasp the plug, not the cord.
• The foot control is used to operate the machine. Avoid placing other objects on the foot control.
• Do not use the machine if it is wet.
• If the LED lamp is damaged or broken, it must be replaced by the manufacturer or its service agent or a similarly qualified person, in order to avoid a hazard.
• If the supply cord connected with the foot control is damaged, it must be replaced by the manufacturer or its service agent or a similarly qualified person, in order to avoid a hazard.
• This sewing machine is provided with double insulation. Use only identical replacement parts. See instructions for Servicing of Double-Insulated Appliances.

SAVE THESE INSTRUCTIONS

For Europe only:
This appliance can be used by children aged from 8 years and above and persons with reduced physical, sensory or mental capabilities or lack of experience and knowledge if they have been given supervision or instruction concerning use of the appliance in a safe way and understand the hazards involved. Children shall not play with the appliance. Cleaning and user maintenance shall not be made by children without supervision.
The noise level under normal operating conditions is less than 75dB(A).
The machine must only be used with foot control of type FR5 manufactured by Shanghai Binao Precision Mould Co., Ltd.

For outside Europe:
This sewing machine is not intended for use by persons (including children) with reduced physical, sensory or mental capabilities, or lack of experience and knowledge, unless they have been given supervision or instruction concerning use of the sewing machine by a person responsible for their safety. Children should be supervised to ensure that they do not play with the sewing machine.
The noise level under normal operating conditions is less than 75dB(A).
The machine must only be used with foot control of type FR5 manufactured by Shanghai Binao Precision Mould Co., Ltd.

SERVICING OF DOUBLE INSULATED PRODUCTS
In a double-insulated product, two systems of insulation are provided instead of grounding. No ground means is provided on a double-insulated product, nor should a means for grounding be added to the product. Servicing of a double-insulated product requires extreme care and knowledge of the system and should be done only by qualified service personnel. Replacement parts for a double-insulated product must be identical to those parts in the product. A double-insulated product is marked with the words ‘DOUBLE INSULATION’ or ‘DOUBLE INSULATED’.

Main Parts Behind the Front Cover
31. Upper looper
32. Lower looper
33. Chainstitch/Coverstitch looper
34. Stitch finger lever (Rolled hem lever)
35. Stationary lower cutter
36. Moveable upper cutter
37. Upper looper clutch
38. 2-thread convertor
39. Chain/Coverstitch thread guide

ACCESSORIES
40. Accessory box
41. Screwdriver
42. Knife blade (for upper cutter)
43. Thread unreeling discs (5)
44. Thread spool nets (5)
45. Oiler
46. Allen key
47. Tweezers
48. Lint brush
49. Cone holders (5)
50. Coverstitch table/Cutter cover C  
   (for Cover/Chainstitch)
51. Needle threader
52. Dust cover
53. Waste tray
54. Extension table including four legs and push pin  
   (not pictured). Assemble the extension table and  
   legs according to separate instruction provided with  
   the table. The push pin is used in the small holes in  
   the table to hold your fabric in place when sewing  
   circles (see page 38).
55. Needle pack (not pictured) including three needles,  
   size #14/90 and two needles, size #12/80 (system  
   ELx705). Two needles, size #14/90, are in the  
   machine on delivery (not pictured).
Optional presser feet specially prepared for this machine are available at your dealer. The snap-on type presser foot used on this machine allows easy removal and replacement.

**Elastic Foot 620 08 65-96**
The Elastic Foot guides and stretches narrow elastic (¼-½”, 6-12mm) as you sew it to fabric. It is great for sewing for active wear, lingerie and other elastic insertion techniques.

**Blindhem & Lace Foot 620 08 69-96**
The Blindhem Foot is perfect for sewing invisible hems and for applying lace. The hem is sewn, overcast and trimmed in one step.

**Beading Foot 620 08 66-96**
The Beading Foot smoothly guides beads and pearls through a channel on the foot for easy application on garments or crafts.

**Piping Foot 620 08 67-96**
The Piping Foot is perfect for inserting packaged piping into seams and on edges for a tailored finish. The trim is sewn between the two layers of fabric in one step. A groove under the foot helps guide the piping. You can also create your own piping for a custom finish.

The Piping Foot makes it fast and easy to cover cording with fabric and to insert piping into seams for a professional look!

**Taping Foot 620 08 68-96**
The Taping Foot is used to apply seam tapes to seams to prevent stretching. It is especially good for stabilizing shoulder seams. With this foot you can reinforce and construct seams in one step.

**Corded Wavy Edge Foot 620 09 72-96**
Sewing a decorative wavy edge is easy with the Corded Wavy Edge Foot. The curvy, softly ruffled edge is a perfect finish for bridal veils, figure skating costumes, ballet skirts, crafts and more.

**Gathering Foot 620 08 83-96**
The Gathering Foot is perfect for gathering a single layer of fabric or simultaneously gathering and stitching two layers of fabric. (The bottom fabric layer will be gathered and the top layer remains flat.) Suitable for light and medium weight woven fabrics.

---

Some fabrics have a lot of excess dye which can cause discoloration on other fabric but also on your overlock machine. This discoloring may be very difficult or impossible to remove.

Fleece and denim fabric, especially red and blue, often contain a lot of excess dye.

If you suspect that your fabric/ready-to-wear garment contains a lot of excess dye, always pre-wash it before sewing to avoid the discoloring.
CONNECT FOOT CONTROL AND POWER SUPPLY

Among the accessories you will find the power cord and the foot control.

Note: Before plugging in the foot control, check to ensure that it is type "FR5" (see underside of foot control).

1. Pull out the cord from the foot control. Connect the foot control to the front socket on the bottom right side of the machine (A).

2. Connect the power cord to the rear socket on the bottom right side of the machine (B). Plug the cord into the wall socket.

   Before plugging your machine in, make sure the voltage is the same as indicated on the plate under the machine. Specifications vary from country to country.

3. Press the ON/OFF switch to ON to turn on power and light (C).

Note: When the front cover is open the safety switch is activated and prevents the machine from sewing, even if the foot control is pressed.

Note: Your HUSKYLOCK™ overlock machine is adjusted to provide the best stitch result at normal room temperature. Extreme hot and cold temperatures can affect the sewn result.

Note: To retract the foot control cord, unplug the foot control from the machine (A). Pull the cord gently and release - the cord will retract itself into the foot control.

POLARIZED PLUG INFORMATION
(For U.S.A. & Canada Only)
This appliance has a polarized plug (one blade wider than the other). To reduce the risk of electric shock, this plug is intended to fit in a polarized outlet only way. If the plug does not fit fully in the outlet, reverse the plug. If it still does not fit, contact a qualified electrician to install the proper outlet. Do not modify the plug in any way.
SPOOL STAND
Insert the spool stand then push to the right as illustrated.

TELESCOPIC THREAD STAND
Extend the telescopic thread stand to its full height, then turn until it clicks into place.
Place the thread spools over the cone holders on the spool pin.
If the machine is already threaded, straighten the threads to prevent tangling.

ATTACH THE WASTE TRAY
Position the machine so the front is nearly aligned with the edge of the table. Insert the U-shaped hooks of the waste tray onto the two suction cups on the underside of the machine. Make sure the trim falls into the bag while sewing.

OPEN FRONT COVER
First push the cover to the right as far as it will go (1) and then pull it downward toward you (2).

CLOSE FRONT COVER
First pull the cover upward and then slide it to the left until it locks.

Note: The front cover has a safety switch and the machine will not sew if the front cover is open.
NEEDLE INFORMATION
This overlock uses a flat shank industrial needle that eliminates the possibility of inserting the needle backwards.

Do not attempt to use a standard household sewing machine needle of any size or type in this overlock.

Use INSPIRA™ needle EL x 705 sizes 14/90 and 12/80, supplied with this machine.

CHANGE NEEDLES

⚠️ Turn off the main power switch and unplug the machine.

1. Turn the hand wheel toward you until the needles are at the highest position.
2. Place a thick piece of fabric under the presser foot. Lower the needles halfway into the fabric.
3. Loosen, but do not remove the needle clamp screw with the allen key while you are holding the needles.
   
   Note: When inserting needles into the A and/or B needle clamps it is necessary to loosen the needle clamp screws for both A and B.

4. Remove the selected needle.
5. Hold the new needle with the flat surface to the back.
6. Insert the needle into the needle clamp as far as it will go.
   
   Note: We recommend using the hole in the needle threader to hold the needle.

7. Securely tighten the needle clamp screw.
   
   Note: Do not over-tighten the screw as this may cause the needle clamp to be damaged.

PRESSER FOOT LIFT (A)
Raise the presser foot by lowering presser foot lift lever at the back of the machine.

Pressing down on the presser foot lift puts the presser foot in the extra lift position.
CHANGE PRESSER FOOT

⚠ Turn off the main power switch and unplug the machine.

1. Raise the presser foot.
2. Turn the hand wheel toward you until the needles are at the highest position.
3. Push the red button on the back of the presser foot ankle to release the presser foot.
4. Raise the presser foot to the extra lift position and the foot will come off.
5. Place the new foot with the pin right underneath the groove of the ankle while in the extra lift position. Lower the presser foot. Push the red button on the back of the presser foot ankle and the foot will snap into place.

MOVABLE UPPER CUTTER

Disengage the Movable Upper Cutter (Position C)

⚠ Turn off the main power switch and unplug the machine.

• Turn the handwheel toward you until the upper cutter is raised to the highest position.
• Open the front cover.
• Pull the movable cutter knob to the right as far as it will go (1).
• Turn the knob toward you counter clockwise (2) until the cutter clicks into the locked position C.

Engage the Movable Upper Cutter (Position S)

⚠ Turn off the main power switch and unplug the machine.

• Open the front cover and pull the movable cutter knob to the right as far as it will go (1).
• Turn the knob clockwise (2) until the cutter clicks into the cutting position S.
GET TO KNOW YOUR HUSKYLOCK™ S25

2-THREAD OVERLOCK CONVERTOR

Engage the 2-thread Overlock Convertor

⚠️ Turn off the main power switch and unplug the machine.

2-thread overlock stitches are sewn using one needle thread and the lower looper thread. Before sewing, the 2-thread converter must be attached to the upper looper.

The 3-thread stretch overlock stitch is also sewn with the 2-thread overlock converter engaged.

1. Open the front cover.
2. Raise the white handle on the converter to insert the sharp edge (A) of the converter in the eye (B) of the upper looper.

Disengage the 2-thread Overlock Converter

⚠️ Turn off the main power switch and unplug the machine.

Lower the white handle on the converter and remove the sharp edge (A) from the eye (B) of the upper looper.

UPPER LOOPER

For Coverstitch and Chainstitch sewing the upper looper needs to be disengaged.

Disengage the Upper Looper

- Turn the handwheel until the upper looper (A) is in its lowest position.
- Push the clutch lever (B) to the right and back until position C is visible from the front.

Engage the Upper Looper

- Turn the handwheel until the upper looper (A) is in its lowest position.
- Pull the clutch lever (B) toward you until position S is visible from the front.
**STITCH FINGER LEVER**

The stitch finger lever should be set to N for all standard overlock sewing. To sew rolled edge you need to retract the stitch finger by setting the stitch finger lever to R.

When moving the stitch finger lever, be sure to push the lever as far as it will go in each direction.

---

**CHANGE TO COVERSTITCH TABLE C**

For Coverstitch and Chainstitch sewing the Coverstitch table C should be used.

- Open the front cover.
- Lift the hook (A) to release the cutter cover and pull it towards you.
- Insert the Coverstitch table by fitting the two front pins (B) into the holes (C) and make sure the hook (D) clicks into place.

---

**EXCLUSIVE SEWING ADVISOR™**

Your overlock machine has the HUSQVARNA VIKING® Exclusive SEWING ADVISOR™ feature (see page 13). When beginning a sewing project, touch your fabric type and weight, and select the stitch you desire. The machine automatically makes the settings and gives recommendations based on that fabric.

Below find fabric selection recommendations.

**Woven or Knit**

The difference between woven and knit fabric is the way the threads are put together. Woven fabrics are made of two thread systems, warp lengthwise and weft crosswise, that intersect at right angles. A knit fabric is made of one thread system with interlaced stitches. A knit fabric usually has stretch.

As a general rule, enter Woven for stable fabrics that have no stretch and Stretch for fabrics that have stretch.

### Suggested Fabric

- **Woven light**  
  Chiffon, voil, organza, batiste, silk, etc.
- **Woven medium**  
  Cotton, chino, wool, satin, etc.
- **Woven heavy**  
  Denim, canvas, terrycloth, etc.
- **Stretch light**  
  Charmeuse, nylon, tricot, single knit jerseys, etc.
- **Stretch medium**  
  Double knit, velour, swimwear, etc.
- **Stretch heavy**  
  Sweater knits, fleece, etc.
Your HUSKYLOCK™ s25 features a Touch Screen. Here you will find all the basic information you need to start sewing. This is also the menu where you select your stitch and adjust the settings of your stitch.

Sewing mode is the first view on the Touch Screen when turning on the machine. Your selected stitch will be shown in real size in the stitch field. When turning on the machine, the last sewn stitch is selected (the first time you turn the machine on, a 4-thread overlock is selected).

TOUCH SCREEN OVERVIEW
1. Selected stitch, shown in real size, stitch number and stitch name  
2. Needle size information (this is the needle size for the selected stitch)  
3. Needle position recommendation (this icon shows which needles are used for the selected stitch)  
4. Cut width recommendation (shows how to set the cutting width)  
5. SEWING ADVISOR™ (enter which fabric you are using to make the best possible settings for the stitch and fabric, see below)  
6. Stitch selection buttons  
7. Stitch length setting  
8. Differential feed setting  
9. Speed setting

SEWING ADVISOR™
Touch this icon to open the extended SEWING ADVISOR™. Here you can select the fabric that best matches the fabric used in your project. The machine will automatically make the settings and give recommendations based on that fabric. The selected fabric is shown next to the machine in the SEWING ADVISOR™-icon.

A – Woven light D – Stretch light  
B – Woven medium E – Stretch medium  
C – Woven heavy F – Stretch heavy

SELECT A STITCH
Touch any of the stitch selection arrows (6) to step back and forth through the different stitches (a Stitch Overview is found on page 29). The selected stitch is shown in real size together with the stitch number and stitch name.

For best results when sewing enter the fabric type and weight of your project in the SEWING ADVISOR™ (see above). The machine makes the suitable settings for the selected stitch.
Sewing Recommendations
Recommendations for needle size, needle position and cutting width are always visible in the Sewing mode view. When a stitch is selected, a pop-up with extended recommendations is displayed. Set your machine according to the recommendations and touch the OK icon to close the pop-up.

10. Cutter cover S/Coverstitch table C
11. Upper cutter position S/C
12. 2-thread converter engaged/disengaged
13. Clutch lever setting S/C
14. Presser foot pressure
15. Stitch finger setting N/R
The extended recommendations for the selected stitch can also be found in the Info System view, see page 16.

STITCH ADJUSTMENTS
Your machine will set the best settings for each selected stitch considering the selected fabric. You can make your own adjustments on the selected stitch.

The setting changes only affect the selected stitch. Your changed settings will be reset to default when selecting another stitch. The changed settings are not automatically saved when turning your machine off.

When a default setting has been changed, it is indicated on the screen by an inverted value.

Thread Tension
To adjust the thread tension, press one of the thread tension buttons (+/-) on the machine. A pop-up appears on the display showing the tension currently set for each thread. When a value is changed, the number is inverted.

Touch “OK” to close the thread tension setting window and return to normal Sewing mode view.

Note: For best results make tension adjustments in small steps of no greater than half a number at a time. Always test sew on a sample of your fabric before sewing on your garment.

See page 41 for an overview of tension adjustments for each stitch type.

Stitch Length
To adjust the stitch length, touch (+) or (-) next to the stitch length icon. Touch (+) for a higher value and (-) for a lower value. When a value is changed, the number is inverted.

Differential Feed Adjustment
To adjust the differential feed, touch (+) or (-) next to the differential feed icon. Touch (+) for a higher value and (-) for a lower value. When a value is changed, the number is inverted.

See page 40 for more instructions on adjusting the differential feed.

SEWING SPEED
Each stitch has a pre-set maximum sewing speed. To adjust the maximum sewing speed, touch (+) or (-) next to the speed icon. The speed can be adjusted in five steps, the selected speed level is shown in the speed icon.
SAVE PERSONAL STITCH

When you have made adjustments to a stitch you can save the adjusted stitch in your personal menu. The stitch name and number will be saved together with fabric selection, tension settings, differential feed settings and stitch length. There are 30 memories where stitches can be saved.

To save the adjusted stitch, touch the Save stitch button (to the right of the display) to open the Save stitch menu.

You can scroll through the list to find a free memory, using the arrows. Any box without a stitch is a free memory and can be used to save your new stitch. Simply touch the memory and your stitch is saved. The stitch information appears in the selected memory.

Overwrite an Occupied Memory

Any box with a stitch is an occupied memory. You can overwrite a previously stored stitch. Simply touch the stitch to overwrite. A pop-up will ask you to confirm that you want to overwrite the previously stored stitch (touch “YES”). The stitch information appears in the selected memory. The saving window will close and you return to the Sewing mode view.

Cancel the saving process by touching the “NO” icon. The machine returns to the “Save Stitch” view and another memory can be selected.

DELETE PERSONAL STITCH

To delete a saved stitch, use the scroll bar arrows to step through the list. The inverted stitch number shows which stitch is selected. Touch the Clear button. A pop-up will ask you to confirm the deletion.

Touch the Save stitch button again to return to the Sewing mode view.

LOAD PERSONAL STITCH

To load a previously saved stitch, touch the Load button.

Use the scroll bar arrows to scroll in the list. Touch a stitch in the list to select it.

A pop-up message with detailed information about the stitch appears. Touch “YES” to load the selected stitch or “NO” to cancel and return to the Load Stitch list.

Touch the Load stitch button again to return to the Sewing mode view.
SETTNGS MENU

Touch the Settings button to open the settings menu. Here you can adjust the machine settings. Touch the Settings button again to close the settings menu and save the changes in the machine memory.

The changes in settings are saved after turning off the machine.

Display Contrast
Change the contrast on the touch screen to suit your needs by touching - or +. The contrast value is displayed next to the -/+ icons.

Sound
Turn the sound on and off by touching the speaker icon. A crossed-out speaker indicates that the sound is off.

Language
Step through the available languages used on screen by touching the arrows. The language description changes for each touch.

Calibrate Touch Screen
When touching the icons on the screen, the screen might need a calibration to adjust to your touch. Touch the calibrate icon to open a special screen for touch screen calibration. First touch the center of the cross in the top left corner (1), then touch the center of the cross in the bottom right corner (2). The calibration screen closes automatically when you have touched the second cross.

INFORMATION MENU

For more information about a selected stitch, touch the Info button. The first tab shows what the stitch is used for. The second tab shows valuable hints, and the third tab shows the types of fabric recommended for that particular stitch. The fourth tab shows the machine setup recommendations for the selected stitch.

See page 14 for explanation of the different recommendations.

Touch the Info button again to close.

POP-UPS

Front Cover Open
As a safety precaution you cannot sew with the front cover open. The pop-up will close when the front cover is closed.

Warning, Overloaded, Please Wait!
If you are sewing on very heavy fabric or if the machine is blocked when sewing, the main motor can get overloaded and the machine will stop sewing. The pop-up will close when the main motor and power supply are secure.

Presser Foot is Up
You cannot start sewing with the presser foot up. The pop-up will close when the presser foot is lowered.

Please Raise the Presser Foot To Calibrate
The presser foot must be raised when turning on the machine. The pop-up will close when the presser foot is raised.
GENERAL THREADING INFORMATION

A color coded diagram is located inside the front cover for quick reference. Always start threading the upper looper, followed by the lower looper and then the needles from right to left.

See the table below for recommendations on what needles and thread to use for different fabric weights.

*Tip: Your new machine is threaded to sew a standard overlock. Tie your own threads to these threads and carefully pull them through the machine, to easily thread your new overlock machine the first time.*

Re-threading if a thread breaks

If the two loopers are not threaded in the correct order they will not create a stitch. If a looper thread breaks always do the following:

1. Unthread the needle(s)
2. Unthread the loopers
3. Thread the upper looper
4. Thread the lower looper
5. Thread the needle(s) from right to left

The following pages give you detailed step by step instructions on threading.

THREAD UPPER LOOPER (GREEN)

- Raise the presser foot to release tension discs.
- Pass the thread from back to front through the thread guide on the thread stand (1).
- Thread the top cover thread guide by pulling the thread towards the right until it slips under the guide. Then pull the thread along the right side of the button as illustrated (2).

- While holding the thread with both hands, pass it between the tension discs and pull it down to make certain it is properly placed between the tension discs (3).
- Thread the looper area of the machine following the green color coded thread guides (4-9).
- Use the tweezers to thread the hole in the upper looper from front to back (9).
- Pull about 10 cm (4") of thread through the looper and place it to the back of the stitch plate.
THREAD LOWER LOOPER (BLUE)

- Raise the presser foot to release tension discs.
- Pass the thread from back to front through the thread guide on the thread stand (1).
- Thread the top cover thread guide by pulling the thread towards the right until it slips under the guide. Then pull the thread along the right side of the button as illustrated (2).

- While holding the thread with both hands, pass it between the tension discs and pull it down to make certain it is properly placed between the tension discs (3).
- Turn the hand wheel toward you until the looper extends out 10 mm (3/8”) from the needle plate edge.
- Thread the looper area of the machine following the blue color coded thread guides (4-10).
- Place the thread through threading guide (4).
- Place the thread through the rear slot of threading guide (5).
- Continue threading through guides 6-8.

- To thread the last thread guide (9), pull about 10 cm (4”) of thread through guide 8.

*Hint: Moving the stitch finger lever to R makes the threading easier. Remember to set it back to N before starting to sew.*

Thread the looper eye (A) from front to back using the tweezers. Make sure the thread runs into the “V” cutouts (B) on threader lever. Firmly hold the thread tail with your left hand and pull the threader lever (C) up into place and back to snap the thread into thread guide 9.
THREAD CHAINSTITCH/COVERSTITCH LOOPER (PURPLE)

- Raise the presser foot to release tension discs.
- Pass the thread from back to front through the thread guide on the thread stand (1).
- Thread the top cover thread guide by pulling the thread towards the right until it slips under the guide. Then pull the thread along the right side of the button as illustrated (2).

- While holding the thread with both hands, pass it between the tension discs and pull it down to make certain it is properly placed between the tension discs (3).
- Turn the hand wheel toward you until the Chainstitch looper is at the far right.
- Thread the looper area of the machine following the purple color coded thread guides (4-11).
- Place the thread through threading guide (4).
- Place the thread through the front slot of threading guide (5).
- Continue threading through guides 6-7.

- Thread the Chainstitch thread guide (8) by holding the thread in front of the thread guide pin and pulling the thread backward and up, until the thread rests inside the thread guide loop and under the spring.
- To thread the last thread guide (10), pull about 10 cm of thread through guide 9.

Thread the looper eye (A) from front to back using the tweezers. Make sure the thread runs into the left “V” cutout (B) on threader lever. Firmly hold the thread tail with your left hand and pull the threader lever (C) up into place and back to snap the thread into thread guide 10.
THREAD RIGHT NEEDLE (RED)

(B on needle clamp)

• Raise the presser foot to release tension discs.

• Pass the thread from back to front through the thread guide on the thread stand (1).

• Thread the top cover thread guide by pulling the thread towards the right until it slips under the guide. Then pull the thread along the right side of the button as illustrated (2).

• While holding the thread with both hands, pass it between the tension discs and pull it down to make certain it is properly placed between the tension discs (3).

Continue to thread points (4-9).

• Slip the thread into the rear slot on the thread guide (5) and into the slot on the take-up lever cover (6). Then slip the thread into the right slot on the thread guides (7) and (8).

• Before threading the eye of the needle, make sure thread is behind the thread guide located on the bottom of the needle clamp (9).

• Thread the eye of the needle. Use the needle threader (page 27) to make needle eye threading easier.

• Pull about 10 cm (4”) of thread through needle eye to hang free.

• Place the thread to the back, under the presser foot.
THREAD LEFT NEEDLE (YELLOW)

(A on needle clamp)

• Raise the presser foot to release tension discs.
• Pass the thread from back to front through the thread guide on the thread stand (1).
• Thread the top cover thread guide by pulling the thread towards the right until it slips under the guide. Then pull the thread along the right side of the button as illustrated (2).
• While holding the thread with both hands, pass it between the tension discs and pull it down to make certain it is properly placed between the tension discs (3).

Continue to thread points (4-9).
• Slip the thread into the middle slot on the thread guide (5) and into the slot on the take-up lever cover (6). Then slip the thread into the middle slot on the thread guides (7) and (8).
• Before threading the eye of the needle, make sure thread is behind the thread guide located on the bottom of the needle clamp (9).
• Thread the eye of the needle. Use the needle threader (page 27) to make needle eye threading easier.
• Pull about 10 cm (4”) of thread through needle eye to hang free.
• Place the thread to the back, under the presser foot.
THREAD LEFT/CHAINSTITCH NEEDLE
(YELLOW)

(D on needle clamp)

• Raise the presser foot to release tension discs.

• Pass the thread from back to front through the thread guide on the thread stand (1).

• Thread the top cover thread guide by pulling the thread towards the right until it slips under the guide. Then pull the thread along the right side of the button as illustrated (2).

• While holding the thread with both hands, pass it between the tension discs and pull it down to make certain it is properly placed between the tension discs (3).

Continue to thread points (4-9).

• Slip the thread into the middle slot on the thread guide (5) and into the slot on the take-up lever cover (6). Then slip the thread into the middle slot on the thread guides (7) and (8).

• Before threading the eye of the needle, make sure thread is in front of thread guide located on the bottom of the needle clamp (9).

• Thread the eye of the needle. Use the needle threader (page 27) to make needle eye threading easier.

• Pull about 10 cm (4") of thread through needle eye to hang free.

• Place the thread to the back, under the presser foot.
THREAD COVERSTITCH NEEDLES

Thread the needles in following order: right (E) - middle (D) - left (C)

Threading the Right Coverstitch Needle (green)  
(E on the needle clamp)

- Raise the presser foot to release tension discs.

- Pass the thread from back to front through the thread guide on the thread stand (1).
- Thread the top cover thread guide by pulling the thread towards the right until it slips under the guide. Then pull the thread along the right side of the button as illustrated (2).
- While holding the thread with both hands, pass it between the tension discs and pull it down to make certain it is properly placed between the tension discs (3).

Continue to thread points (4-9).

- Slip the thread into the rear slot on the thread guide (5) and into the slot on the take-up lever cover (6). Then slip the thread into the right slot on the thread guides (7) and (8).
- Before threading the eye of the needle, make sure thread is in front of thread guide located on the bottom of the needle clamp (9).
- Thread the eye of the needle. Use the needle threader (page 27) to make the threading easier.
- Pull about 10 cm (4") of thread through needle eye to hang free.
- Place the thread to the back, under the presser foot.
Thread Middle Coverstitch / Chainstitch Needle (red)

(D on the needle clamp)

- Raise the presser foot to release tension discs.

- Pass the thread from back to front through the thread guide on the thread stand (1).

- Thread the top cover thread guide by pulling the thread towards the right until it slips under the guide. Then pull the thread along the right side of the button as illustrated (2).

- While holding the thread with both hands, pass it between the tension discs and pull it down to make certain it is properly placed between the tension discs (3).

Continue to thread points (4-9).

- Slip the thread into the middle slot on the thread guide (5) and into the slot on the take-up lever cover (6). Then slip the thread into the middle slot on the thread guides (7) and (8).

- Before threading the eye of the needle, make sure thread is in front of thread guide located on the bottom of the needle clamp (9).

- Thread the eye of the left needle. Use the needle threader (page 27) to make the threading easier.

- Pull about 10 cm (4") of thread through needle eye to hang free.

- Place the thread to the back, under the presser foot.
Thread Coverstitch Left Needle (yellow)
(C on needle clamp)

• Raise the presser foot to release tension discs.

• Pass the thread from back to front through the thread guide on the thread stand (1).

• Thread the top cover thread guide by pulling the thread towards the right until it slips under the guide. Then pull the thread along the right side of the button as illustrated (2).

• While holding the thread with both hands, pass it between the tension discs and pull it down to make certain it is properly placed between the tension discs (3).

Continue to thread points (4-9).

• Slip the thread into the front slot on the thread guide (5) and into the slot on the take-up lever cover (6). Then slip the thread into the left slot on the thread guides (7) and (8).

• Before threading the eye of the needle, make sure thread is in front of thread guide located on the bottom of the needle clamp (9).

• Thread the eye of the left needle. Use the needle threader (page 27) to make the threading easier.

• Pull about 10 cm (4") of thread through needle eye to hang free.

• Place the thread to the back, under the presser foot.
NEEDLE THREADER

To make threading the needles easier, use the needle threader included with the accessories.

Turn the handwheel so the needles are in their highest position and lower the presser foot. Make sure one of the rectangular markings of the needle threader is pointing upwards. Place the thread from right to left in the notch on the tip of the needle threader.

Hold the needle threader against the needle. Move the needle threader down to the needle eye and press gently against the needle, causing a small metal pin to push the thread through the needle eye and form a thread loop.

Use the needle threader to pull the thread loop out behind the needle.

CHANGE THREAD

The following is an easy way to change threads:

1. Cut the thread in use near the spool, behind the guides on the telescopic thread stand.
2. Remove the thread spool and place the new thread on the spool pin.
3. Tie the end of the new thread to the end of the old thread. Cut the thread tails to 2-3 cm (1") in length and firmly pull both threads to test knot security.
4. Raise the presser foot to release the tension discs.
5. Pull the threads through the machine one at a time until the knots are in front of the needle. If the threads do not pull easily, check for tangles on thread guides or looping under thread stand.
6. Cut the thread behind the knot and thread the needle.

Note: When using standard thread spools, place the thread unreeling disc as shown to prevent the thread from getting caught on the edge of the spool.
**STITCH OVERVIEW**

Below, find a stitch overview of all the Huskylock s25 stitches. When selecting fabric and stitch, settings for tension, stitch length, differential feed and presser foot pressure are set automatically. The table shows the settings that need to be done manually. The pre-set values for thread tension that are set for each stitch/fabric are our recommendations based on normal conditions. It may be necessary to adjust the thread tension according to the stitch, type of fabric and thread you are using (See page 14 and 41 for detailed information on tension adjustments).

**Icon Explanation Sheet**

**COVERSTITCH, WIDE (page 36)**
For hems on stretch fabrics and for decorative effects on all kind of fabrics. Use decorative thread in looper for embellishment.

**COVERSTITCH, NARROW (page 36)**
For hems on stretch fabrics and for decorative effects on all kind of fabrics. Use decorative thread in looper for embellishment.

**CHAINSTITCH (page 38)**
For all types of sewing such as construction, hemming and piecing quilts. Baste with ease for construction as it is an easily unraveled stitch, and never run out of bobbin thread. Use decorative thread in looper for embellishment.
START SEWING

Pin Placement
When securing the fabric pieces using pins, insert straight pins to the left of the presser foot. The pins will be easy to remove and are away from the cutters.

Warning: Sewing over pins will damage and might destroy the cutting edge of the cutters.

- When the machine is completely threaded, close the front cover and bring all of the threads over the stitch plate and slightly to the left under the presser foot.
- Ensure that the upper blade moves against the lower blade correctly by turning the handwheel slowly toward you. If the blades are not moving correctly, check if there are any fabric or waste thread stuck between the blades.
- Hold the threads and pull them slightly.
- Turn the hand wheel toward you two to three complete turns to start making a thread chain. Check if all threads wind around the stitch finger of the stitch plate. If the threads do not wind around the finger, make sure each thread is threaded correctly.
- Continue holding the thread chain while pressing the foot control. Sew until the chain is 5-8 cm (2-3") in length.

- Place fabric under the front of the presser foot and sew a test sample. Guide the fabric slightly with your left hand while sewing. Do not pull on the fabric as this may deflect the needle, causing it to break.

Chain Off
- When you reach the end of the fabric, continue sewing while drawing the finished fabric gently backwards and to the left. This is called chaining off. It prevents the threads from coming undone and prepares for the next sewing task.
- Cut off the thread chain 2-5 cm (1-2") behind the presser foot using the thread cutter on the left side of the machine. Pull the threads around the thread cutter from the back, then toward you.

Tip: When you have re-threaded the machine, always chain off and test sew a sample to test thread tension.

Tip: The presser foot on this machine has marks to indicate the needle position. Use this as a guide when sewing.
ROLLED EDGE SEWING

The rolled edge stitch is appropriate for lightweight fabrics such as lawn, voil, organdy, crepe, etc. The rolled edge is achieved by adjusting the thread tension to make the fabric edge roll under the fabric while overlocking. Adjust the thread tension to change the degree of rolling. To sew a rolled edge you need to set the stitch finger lever to R.

Tip: For a beautiful rolled edge, thread the upper looper with a decorative thread and the needle and lower looper with lightweight regular thread.

Note: Make a thread chain and test sew on a sample of your fabric before sewing on your garment. Hold the thread chain before sewing to keep it from curling into the seam.

Note: The minimum overlock stitch width that can be obtained for rolled edging is approximately 1.5 mm.

COVERSTITCH SEWING

The Coverstitch can be used for covering, binding or top-stitching necklines and for hemming the bottom of T-shirts and sweatsuits, etc. in addition to flat joining seams (plain seaming). The Coverstitch is most suitable for stretchy fabrics. It can also be used for woven fabrics.

Machine Set Up

1. Disengage (C position) the movable upper cutter (page 10).
2. Set the stitch finger lever to R (page 12).
3. If inserted, remove needle B and needle A.
4. Install needles C, D and/or E depending on desired Coverstitch.
5. Disengage the upper looper (page 11).
6. Remove cutter cover S and install Coverstitch table C (page 12). The graduations on the Coverstitch table indicate the distance, in cm and inches, from Coverstitch middle needle. Use it as a guide when positioning the fabric edge.
7. Close front cover.

Securing the Coverstitch Seam End

Chaining off is not possible after sewing Coverstitch because it causes the seam to unravel when the looper thread is pulled out at the end of sewing. Therefore, secure the seam end in the following manner.

When Sewing through to the Edge of Fabric

1. Knot the needle threads (2 or 3 threads) together first, as shown on the illustration.
2. Tie these threads with the looper threads.
3. Cut extra threads.

When Sewing is Stopped Halfway

1. Raise the presser foot and turn the handwheel one full rotation away from you. Pull the fabric under and behind the presser foot while securing the thread ends with your thumb and your forefinger to prevent the seam from unraveling.
2. Pull out the needle threads (2 or 3 threads) on the underside of the fabric and knot the threads in the same manner as described above.
3. Cut extra threads.

Note: Normally, the seams at the start of sewing do not unravel, but it is wise to secure the seam end following the same steps as described when sewing through to the edge of the fabric.
FLATLOCK SEWING

A flatlock stitch is made by sewing the seam and pulling the fabric apart to flatten the seam. The flatlock stitch can be used both as a decorative construction stitch, sewing two pieces together (Standard flatlock stitch), or for embellishment on only one piece of fabric (Ornamental flatlock stitch).

There are two ways to sew a flatlock stitch. Either with the wrong sides of the fabric together to create a decorative look, or with the right sides together, to create a ladder stitch.

Standard Flatlock Stitch

1. Use the left or the right needle.

2. For 2-thread flatlock: Engage the 2-thread converter (page 10). Thread the lower looper and the left (A) or right (B) needle.

   For 3-thread flatlock: Thread the lower and upper looper and the left (A) or right (B) needle.

3. Place the wrong sides of the two pieces of fabric together to sew a decorative stitch on the right side of the garment.

4. Sew the seam, trimming the excess fabric. The needle thread will form a V on the underside of the fabric. The lower looper thread will pull into a straight line at the fabric edge.

5. Unfold the fabric and pull on opposite sides of the seam to pull the stitches flat.

Ornamental Flatlock Stitch

1. Disengage the movable upper cutter (C position) (see page 10). The fabric should not be trimmed on this stitch.

2. Follow steps 1-3 above.

3. Fold the fabric piece, wrong sides together, to sew a decorative stitch from the right side of the garment (at the fold).

4. Position the fabric so the seam is sewn with part of the stitch extending off the fabric.

5. Unfold the fabric and pull on opposite sides of the stitch to flatten.

Tip: The upper looper thread is the prominent thread in the flatlock stitch. Place a decorative thread in the upper looper and regular threads in the lower looper and needle.

Ladder Stitch

To create a ladder stitch, sew with right sides of the fabric together. The needle thread will be the prominent thread that creates the ladder.
CHAINSTITCH SEWING

The Chainstitch is sewn with two threads, one needle and one looper. Normally, the machine trims the fabric edge while the seam is being sewn. However, a Chainstitch seam can be placed at a desired distance from edge of fabric by putting the upper cutter in position C, disengaging the upper looper and installing Coverstitch table C.

⚠️ Turn off the main power switch and unplug the machine.

Machine Set Up

1. Disengage the movable upper cutter (C position) (see page 10). The fabric should not be trimmed on this stitch.
2. Disengage the upper looper (page 11).
3. Remove cutter cover S and install Coverstitch table C (page 12). The graduations on the Coverstitch table indicate the distance, in cm and inches, from Coverstitch middle needle. Use it as a guide when positioning the fabric edge.

Start and End of Sewing

When starting to sew, pull the thread chain lightly to the rear of machine until the needle penetrates the fabric.

When starting to sew after threading the machine, sew 2-3 cm (1- 2”) on a scrap fabric and chain-off (see page 35) to make a chain.

At end of sewing, pull the fabric lightly to the rear of machine and chain-off.

SEWING HINTS

Pintuck Sewing

1. Sew decorative pintucks on the fabric before cutting out the garment.
2. Use overlock right needle and select narrow 3-thread overlock stitch (stitch number 7).

Note: The rolled edge stitch can also be used for this technique.

3. Disengage the movable upper cutter (C position) (see page 10). The fabric should not be trimmed on this stitch.
4. Mark the fabric with the desired number of pintucks using a water-soluble fabric marker.
5. Fold the fabric with the wrong sides together and sew.
6. Press the pintucks in the same direction.

Lowering the needle(s)

When you stop sewing, the machine always stops with the needle(s) in the up position. Tap the foot control one time to lower the needle(s) into the fabric. The needle down position is useful to hold your fabric in place when making adjustments or when turning the fabric to change direction when chainstitch sewing.

Sew in Circles

(only suitable for heavy and medium weight fabrics)

The extension table has 13 holes in it used to sew in circles. Sew circles with the movable upper cutter engaged (C position) (see page 10) to get a beautiful edge, or disengage the movable upper cutter (S position) and sew circle embellishments.

1. Mark a dot in the center of the area that will be the circle and place stabilizer under the fabric.
2. Pierce the fabric at the mark with the sharp end of the push pin (A). Place the pin into the selected hole on the extension table. Push the pin and its bottom plate (B) together.
3. Lower the presser foot and sew. The fabric will feed in a circle around the push pin.
4. When the circle is complete, overlap the seam for a few centimetres (an inch). Thread the threads into a large eyed, hand sewing needle and pull them to the wrong side of the fabric and secure.

Securing the Thread Chain

1. Thread the chain into a large eyed, hand sewing needle.
2. Insert the needle into the end of the seam and pull the chain into the seam to secure the threads.

Sewing with heavy decorative threads in the loopers

Heavy decorative threads need less thread tension than regular threads to give the best sewing result. When threading a heavy decorative thread, place the thread through the hole in the top cover looper thread guide and let it pass above the guide as illustrated below. Then continue threading as described in the threading section.

Braiding by Chaining Off

1. Disengage the movable upper cutter (C position) (see page 10).
2. Insert filler cord such as yarn or twill tape through the hole in the front of the foot.
3. Position the filler cord under the foot and chain off the desired length.
4. Chained off braids can be used individually or woven into 3 or 4 ply braids.
STITCH WIDTH ADJUSTMENTS

The stitch width can be increased or decreased by changing the needle position or with the cutting width dial.

**Width Adjustment by Changing Needle Position**

A) When only the left needle, or when both needles are used the stitch width is 6 mm.

B) When only the right needle is used the stitch width is 4 mm.

C) When using the chainstitch needle the stitch width is 9 mm.

**Width Adjustment with the Cutting Width Dial**

By fine tuning the cutting width using the cutting width dial further adjustment are possible within the range shown below.

- When only the left needle is used: 5 - 7 mm
- When only the right needle is used: 3 - 5 mm
- When using the chainstitch needle: 8 - 10 mm

Turn the dial to adjust the desired seam width. For standard setting the dial should be set to N.

PRESSER FOOT PRESSURE ADJUSTMENT

The presser foot pressure for sewing based on normal conditions should be set to N. Adjustment might in some conditions be necessary. Increase or decrease the pressure until you are satisfied with the result. Always test sew on a sample of your fabric before sewing on your garment.

*Less pressure:* Decrease the pressure by turning the adjustment dial in counter-clockwise direction to a value between N and 1.

*More pressure:* Increase the pressure by turning the adjustment dial in clockwise direction to a value between N and 5.

*Back to standard setting:* Turn the adjustment dial until the mark on the knob is set to N.
DIFFERENTIAL FEED ADJUSTMENT

The differential feed system consists of two sets of feed teeth arranged one behind the other. Both feed teeth work independently of each other to give perfect results when sewing on specialty fabrics. When the amount of feed by the front feed teeth is changed in relation to the feed by the rear feed teeth it will “stretch” or “gather” the fabric.

Use the differential feed to prevent stretching of knit fabrics and puckering of lightweight fabrics. The differential feed is set automatically for each stitch and is adjusted for the selected fabric. See page 14 for information on how to adjust the differential feed setting.

Gathered Overlock (stretch, knit fabrics)

When overcasting stretch fabric, such as knits and jersey, adjust the differential feed to a value between N and 2.0. The setting depends on the material being sewn as well as the desired amount of gathering. Test sew with different settings before sewing on your garment.

Stretch Overlock (lightweight fabrics)

When overcasting light woven or loosely knit fabrics, such as silk and silky knitwear, adjust the differential feed to a value between 0.6 and N. When sewing, apply gentle tension to the fabric by holding the seam lightly in front and back of the presser foot. The setting depends on the material being sewn as well as the desired amount of stretching. Test sew with different settings before sewing on your garment.

FINE TUNING TENSION SETTINGS

Thread tension is automatically set when selecting a stitch but it may have to be fine tuned depending on:

- Type and thickness of the fabric
- Needle size
- Size, type and fibre content of the thread

See page 14 for how to adjust the thread tension settings.

2-Thread Overlock

When the lower looper thread lies on the underside of the fabric

- Increase the looper thread tension (blue), or decrease the needle thread tension (yellow or red).

When the needle thread tension is too loose

- Increase the needle thread tension (yellow or red), or decrease the lower looper thread tension (blue).

2-thread overlock, wrap

When the lower looper thread tension is too tight or needle thread tension is too loose

- Decrease the lower looper thread tension (blue), or increase the needle thread tension (yellow or red).

When the lower looper thread tension is too loose

- Increase the lower looper thread tension (blue).

3-thread flatlock stitch

When the lower looper thread tension is too loose

- Increase the lower looper thread tension (blue), or decrease the needle thread tension (yellow or red).

When the upper looper thread tension is too loose

- Increase the upper looper thread tension (green), or decrease the needle thread tension (yellow or red).

When the needle thread tension is too loose

- Increase the needle thread tension (yellow or red), or decrease the upper looper thread tension (green).

3-thread overlock

When the upper looper thread lies on the underside of the fabric

- Increase the upper looper thread tension (green), or decrease the lower looper thread tension (blue).

When the lower looper thread appears on the top of the fabric

- Increase the lower looper thread tension (blue), or decrease the upper looper thread tension (green).

When the needle thread is too loose

- Increase the needle tension (yellow or red).

4-thread overlock

When the upper looper thread lies on the underside of the fabric

- Increase the upper looper thread tension (green), or decrease the lower looper thread tension (blue).

When the lower looper thread appears on the top of the fabric

- Increase the lower looper thread tension (blue), or decrease the upper looper thread tension (green).

When the left needle thread tension is too loose

- Increase the needle thread tension (yellow).

When the right needle thread tension is too loose

- Increase the right needle thread tension (red).

Safety stitch

When the lower looper thread tension is too loose

- Increase the lower looper thread tension (blue).

When the upper looper thread lies on the underside of the fabric

- Increase the upper looper thread tension (green), or decrease the lower looper thread tension (blue).

When the lower looper thread appears on the top of the fabric

- Increase the lower looper thread tension (blue), or decrease the upper looper thread tension (green).

When the right needle thread tension is too loose

- Increase the needle thread tension (red).

When the chainstitch needle thread tension is too loose

- Increase the chainstitch needle thread tension (yellow), or decrease the chainstitch looper thread tension (purple).

Chainstitch

When the chainstitch needle thread tension is too loose

- Increase the needle thread tension (yellow), or decrease the chainstitch looper thread tension (purple).

Coverstitch

When the coverstitch looper thread is too loose

- Increase the coverstitch looper thread tension (purple).

When the coverstitch left needle thread tension is too loose

- Increase the coverstitch left needle thread tension (yellow), or decrease the coverstitch looper thread tension (purple).

When the coverstitch middle needle thread tension is too loose

- Increase the coverstitch middle needle thread tension (red), or decrease the coverstitch looper thread tension (purple).

When the coverstitch right needle thread tension is too loose

- Increase the coverstitch right needle thread tension (green), or decrease the coverstitch looper thread tension (purple).

When the top surface of fabric bulges between needle threads and the seams on the underside of the fabric becomes tight:

- Decrease the coverstitch looper thread tension (purple).
An overlock machine requires more frequent maintenance than a conventional sewing machine since a lot of lint is produced when the cutters are cutting the fabric. Also an overlock runs at a very high speed and needs to be oiled frequently to lubricate the internal working parts.

**CLEANING**

⚠️ *Turn off the main power switch and unplug the machine.*

Open the front cover and remove all the lint using the lint brush.

Close the front cover and wipe the exterior surface of your machine with a soft cloth to remove any dust or lint built up.

**Cleaning the Touch Screen**

Wipe the touch screen with a clean, soft and damp cloth.

**OILING**

⚠️ *Turn off the main power switch and unplug the machine.*

To keep the machine running smoothly and quietly the moving parts, pointed out on the picture, must be lubricated often. Use supplied sewing machine oil. Do not use any other oil, it could damage the machine. Wipe the machine surface to remove all excess oil before sewing.
REPLACING THE MOVABLE UPPER CUTTER

⚠️ Turn off the main power switch and unplug the machine.

The movable upper cutter should be changed when it becomes dull. The upper cutter can be replaced according to the following directions. If you are having any difficulties, consult your authorized HUSQVARNA VIKING® dealer.

- Open the front cover and set the movable upper cutter (1) in S position (See page 11).
- Loosen the set screw (2) and remove the upper cutter (1).
- Turn the handwheel until the upper cutter holder is in its lowest position.
- Place a new upper cutter in the groove of the upper cutter holder and tighten the set screw (2).
- Make sure the front edge of the movable upper cutter is 0.5-1.0 mm lower than the cutting edge of the stationary cutter (3).

STORAGE

When the machine is not in use, be sure to keep it unplugged. Cover the machine with the dust cover to protect it from the dust. Store the machine, so it is not exposed to direct sunlight or humidity.
TROUBLE SHOOTING

Fabric Does Not Feed Well
• Lengthen stitch length.
• Increase presser foot pressure for heavyweight fabric.
• Decrease presser foot pressure for lightweight fabric.
• Check the differential feed.

Fabric Puckers
• Loosen thread tension.
• Check for tangled or caught thread.
• Use high quality lightweight thread.
• Shorten stitch length.
• Decrease presser foot pressure for lightweight fabrics.
• Check the differential feed.

Needle Breaks
• Insert needle correctly.
• Do not pull fabric while sewing.
• Tighten needle set screw.
• Use a larger size needle on heavy fabrics.

Thread Breaks
• Check threading.
• Check for tangled or caught thread.
• Insert needle correctly.
• Insert new needle, current needle may be bent or have a blunt point.
• Use high quality thread.
• Loosen thread tension.

Skipped Stitches
• Insert new needle, current needle may be bent or have a blunt point.
• Tighten needle set screw.
• Insert needle correctly.
• Change type or size of needle.
• Check threading.
• Increase presser foot pressure.
• Use a high quality thread.

Irregular Stitches
• Balance thread tension.
• Check for tangled or caught thread.
• Check threading.

Irregular Trimming
• Check alignment of cutters.
• Replace one or both cutters.

Fabric Jams
• Check for tangled or caught thread.
• Compress thick layers of fabric with conventional machine before sewing with overlock.

Machine Does Not Operate
• Connect machine to power source correctly.

SERVICING

Have your overlock machine serviced regularly by your local authorized dealer!

If you have followed the troubleshooting information and still have problems, take your overlock machine to your HUSQVARNA VIKING® dealer. If there is a specific problem, it is a great help to test sew with your thread on a scrap of your sewing fabric and bring it to your dealer. A sewing sample will often give much better information than words.

Non-original Parts and Accessories
The warranty does not cover any defect or damage caused by use of non-original accessories or parts.
SPECIFICATIONS

Sewing speed  Maximum 1100 stitches/min

Stitch length  1.0 - 4.0 mm

Differential feed ratio  0.6 - 2.0

Overlock stitch width  Left needle: 5.0 - 7.0 mm
                      Right needle: 3.0 - 5.0 mm
                      Coverstitch: 3.0 - 6.0 mm

Needle bar stroke  27 mm

Presser foot rise  4.5 mm

Needles  INSPIRA™ overlock needles - system EL×705
         size: #14/90, #12/80

Number of needles  3, 2, 1

Number of threads  2, 3, 4

MACHINE DIMENSIONS

Width  322 mm
Length  447 mm
Height  340 mm
Weight  10.0 kg
We reserve the right to change the machine equipment and the assortment of accessories without prior notice, or make modifications to the performance or design. Such modifications, however, will always be to the benefit of the user and the product.
