

## Using Nebs Pre-Wound Bobbins In The Husqvarna Viking Designer Machines

Pre-wound bobbins are popular for embroidery because the bobbins hold a lot of thread and are pre-wound and ready to go! Here are some guidelines for their use.

There is only one type of pre-wound bobbin approved for use in the Designer I and Designer II for embroidery. It is #140 000 746. It is a Nebs, size L.

They are not marked with the H symbol, like your Husqvarna Viking green bobbins are. You need to be sure when inserting the bobbin into your Designer, that the thread is coming off to the left and the bobbin turns counter clockwise.

On occasion, you will find that the bobbin empty sensor will not work. This is because it is designed for the Husqvarna Viking green bobbin, not the pre-wound Nebs bobbin.

The thread on these bobbins is very fine, and designed for embroidery. It should not be used for regular sewing.
