

*These Simply Excellent Updates are from your suggestions and creativity.
Husqvarna Viking listens to your sewing wishes.
Now your Designer SE is even more user friendly, new and fun!*

Husqvarna Viking Designer SE New! Software Version 8079

Now, your Husqvarna Viking Designer SE is a Brand New Sewing Designer!

WOW! RESIZE DESIGNS!

One of the most exciting new features is the new *Embroidery Resize Function*. With a touch and drag change your design size and your Designer SE quickly recalculates the stitch count. Larger designs will have more stitches. Smaller will have less. Your Interactive Designer Screen will display the resized design in 3D. Either way your resized design will be proportionally perfect. Choose from two fill type options: retain fill type and default fill type.

WOW! USB MOUSE!

A USB mouse (sold as an optional accessory) lets you easily navigate and quickly move about your Interactive Designer Screen and Embroidery Function.

EXCITING NEW FEATURES:

Husqvarna Viking engineers are constantly developing new features to add to your Designer SE.

WOW! NEW HOOP SIZE!

The perfect size hoop is now yours, as the updates support the new 5" x 7" Design Hoop (180 x 130 mm) (sold as an optional accessory) – the perfect size requested by so many.

OTHER SIMPLY EXCELLENT UPDATES:

- ✂ In embroidery, the *Sensor Presser Foot* now rises to the extra lift position when it is done embroidering or when the thread cut pop-up appears. You can easily trim or cut threads, remove the hoop or just admire your work.
- ✂ Your Designer SE now tells you the total *amount of available machine memory*. Simply touch, "My Info".
- ✂ When you select *Mega Hoop*, the entire hoop area on the Interactive Designer Screen shows a *3D background* and highlights your hoop position.
- ✂ A *green background* indicates whether you are in Customizing or Embroidery mode. Just another convenience to help your sewing experience.
- ✂ When embroidering, *maintain your viewing position in thread color list* after you have touched a new color.
- ✂ In embroidery lettering/text/alphabet programs are saved as words instead of individual letters.
- ✂ The selected needle stop position (up or down) is shown with an up or down arrow next to the recommended needle on the Interactive Designer Screen.
- ✂ When selecting a new stitch, a pop up reminder indicates that stitch width safety or twin needle safety are selected. The stitch width automatically adjusts to fit your setting.
- ✂ When using the Sewing Advisor® to select best stitch, length, width, tension, sewing speed or Sensor Foot Pressure for your fabric and technique, the menu on the Interactive Designer Screen displays selected stitch.
- ✂ Check names of built-in fonts with a touch to Quick Help.
- ✂ A short cut function in program toggles the cursor between the last position to the first position of a stitch and/or lettering program.
- ✂ The window for programming stitches or letters is now the "Program" window.
- ✂ Audible Alarm sounds can be turned off in SET menu.
- ✂ Select from 7 different languages in the SET menu.
- ✂ Feedback on stitches, settings, etc. has been implemented.
