

How to position the Fab-U-Motion on the Husqvarna Viking Sapphire Sewing Machine

Place your Fab-U-Motion on your Husqvarna Viking Sapphire sewing machine according to instructions included in the box. Attach the electrical connections following the same instructions.

To determine the final placement of your Fab-U-Motion, begin by placing the right hand edge of the black base of the Fab-U-Motion at the 4 1/2" mark on the base of your Sapphire Sewing Machine. Next, be sure that the machine sits 1 1/2" back from the front edge of the black base plate measuring from the front left tip of the machine as shown.

Next, check that the back of your Sapphire machine is even with the back of the black Fab-U-Motion plate as shown. Note, you are looking at the back of the machine.
